## DETAILED ACTION

### *Specification*

The disclosure is objected to because of the following informalities: The specification fails to contain the correct continuing data on page 1, line 1 (the current divisional data is not included). Appropriate correction is required.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 18-28 are rejected under 35 U.S.C. 102(b) as being anticipated by Crawford et al.'056 (Crawford). Crawford discloses a transaxle (figure 1) comprising a housing 12 and a pair of axially aligned axles (24,68) capable of being engaged and disengaged (via gear assemblies 26-38 and 54) from one another. Also, Crawford shows the transaxle having an input shaft 18 rotatably supported in the housing (via

bearing/bushing members as seen in figure 1) and various reduction gears connected between the input shaft and at least one of the axles. Further, Crawford discloses that the transaxle can be used on "garden tillers and the like" (column 1, lines 8-9) which would inherently encompass such a transaxle being connected to an engine and employed in concert with support wheels and operator handles.
